

SOLAR POWER SAVES YOU MONEY!

Making your own energy is much cheaper than buying from the electrical grid. Your return on investment is very fast and you don't need to worry about the maintenance and repairs as EEN will do that for you. We can also offer financing with local banks.

SOLAR POWER

ENERGY EFFICIENCY

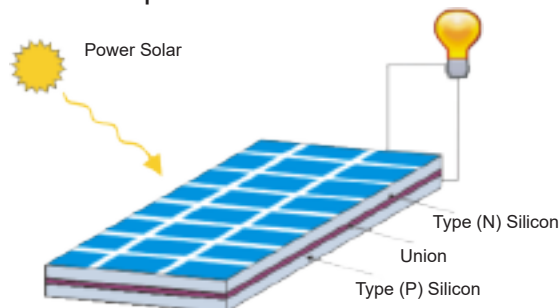

SOLAR ENERGY AND THE ENVIRONMENT

Solar energy is a renewable energy source which means that it is inexhaustible on a human scale. One of the fundamental advantages of this energy is that it allows the production of electricity without resorting to any type of combustion, and therefore there are no emissions into the atmosphere of pollutants that cause rain phenomena acidic and the greenhouse gas emissions.

In these times of economic crisis, energy, storage, efficiency and solar power energy saves our scarce economic resources, postpones the depletion of our fossil resources (on which however our energy supply depends mostly) and finally, it seems to reveal itself as one of the best alternatives to reduce CO2 emissions.

Solar power transforms the sun's energy into electric power.

Photovoltaic solar energy which can be used in the generation of electricity through the use of photovoltaic solar panels (PV) that convert solar radiation into electricity, making it applicable to multiple activities of life.

Having the sun as the main source of energy for our planet. Is a logical solution to efficiently transform solar radiation into electrical power.

This advantage of solar energy is especially favorable in spaces of high ecological value, where the preservation of the natural environment is important.

It also replaces fossil fueled generators in rural areas. Solar energy is a renewable energy source, which means that it is inexhaustible.

A solar system is only producing power when the sun is shining.

EEN solves this problem by adding battery storage so you can use the power whenever it is needed.

Rooftop solar on your barn, commercial or industrial buildings can really save you money and you can help the environment as well. We also offer several energy efficiency solutions such as audits and technology to reduce air conditioners energy use.

These days people are starting to use raised solar panels on farms so you get dual use from your land, farming and solar power.
